

The Learning Registry: A How To Primer for Digital Content Publishers and Aggregators SIIA Webinar

December 20, 2012

The Learning Registry (LR) is an open source technical system designed to facilitate the capturing, sharing, and analyzing of learning resource data to broaden the usefulness of digital content to benefit educators and learners. The LR aims to support resource creators, publishers, curators, and consumers who are collaborating to broadly share resources, as well as information about how those resources are used by educators in diverse learning environments across the Web. The LR was initiated with federal leadership and launched last month. Join LR leaders on this SIIA webinar to understand how the LR can be leveraged by publishers, aggregators and other digital learning providers.

Speakers:

Steve Midgley, Deputy Director of Education Technology, U.S. Department of Education
Susan Van Gundy, Director of Education and Strategic Partnerships, National Science, Technology, Engineering, and Mathematics Digital Library (NSDL)
Gail Lewis (moderator), Senior Product Manager, Capstone Digital Solutions
