

The Anti-Piracy Working Group addresses piracy and misuse of market data in its many forms. Members of the Working Group seek to enlighten and educate several target audiences regarding unauthorized use of data and proprietary content and the ramifications of this misuse. These target audiences have been identified based on intent and are labeled as inadvertent, rationalizer, and malicious. Members of the Group also communicate among themselves to provide different perspectives on how to avoid, recognize, discourage, and address misuse of data.
